(For previous parts see Vol. XXV., pp. 110-123; 174-192; 245-268.)

*ADDENDA.*

THE following additional records, for the advice of which we have to thank many correspondents and ringing stations, are now published in order to make the series as complete as possible.

ROOK (*Corvus f. frugilegus*) p. 113.

These records are of great interest, as they are the first to show the breeding area of some, at all events, of our immigrants.

SISKIN (*Carduelis spinus*).

This is the first Siskin ringed abroad which has been reported here. M. C. Dupond informs me that there is proof from ringing that *some* of the Siskins found as migrants in Belgium are Scandinavian breeding birds.

Yorkshire —.6.31. Algarve, Portugal 21.9.31.

These two records are exceptionally valuable when considered in conjunction with the Warwickshire ringed Wigeon, which was recovered in Uralsk approximately 360 miles north-east of the delta of the Volga in the north of the Caspian Sea, where these birds were ringed. It is a curious coincidence that they were both shot on the same date, though in widely separated localities.

With reference to the entry under R.38989 Driebitz, Posen (p. 255), the details given are correct according to Mr. Rivière's original record, published at the time in *British Birds*, but the Rossitten records prove that the ringing data are wrong, and the record must be cancelled.
