In terms of taxonomy and scientific nomenclature, the *BB* list follows the International Ornithological Union's *IOC World Bird List* (<http://www.worldbirdnames.org/>). The English names used are broadly the same as those used in previous versions of the *BB* list. In most cases these are the same as the international English names used in the *IOC World Bird List*, but in some cases more familiar European names are retained (for example, divers and skuas rather than loons and jaegers). Separate columns in the *BB* list denote differences in English names from the *IOC World Bird List* and also from the vernacular names used by the British Ornithologists' Union in the official British List (<https://www.bou.org.uk/british-list/>).

Status of birds in Great Britain

The categories of the **British List** are defined as follows:

- A. Species that have been recorded in an apparently natural state at least once since 1st January 1950.
- B. Species that were recorded in an apparently natural state at least once between 1st January 1800 and 31st December 1949, but have not been recorded subsequently.
- C. Species that, although introduced, now derive from the resulting self-sustaining populations.
 - C1. Naturalised introduced species - species that have occurred only as a result of introduction, e.g. Little Owl *Athene noctua*.
 - C2. Naturalised established species - species with established populations resulting from introduction by man, but which also occur in an apparently natural state, e.g. Greylag Goose *Anser anser*.
 - C3. Naturalised re-established species - species with populations successfully re-established by man in areas of former occurrence, e.g. Red Kite *Milvus milvus*.
 - C4. Naturalised feral species - domesticated species with populations established in the wild, e.g. Rock Dove/Feral Pigeon *Columba livia*.
 - C5. Vagrant naturalised species - species from established naturalised populations abroad, e.g. Sacred Ibis *Threskiornis aethiopicus* from the naturalised French populations. There are currently no species in category C5.
 - C6. Former naturalised species - species formerly placed in C1 whose naturalised populations are either no longer self-sustaining or are considered extinct, e.g. Lady Amherst's Pheasant *Chrysolophus amherstiae*.
- D. Species that would otherwise appear in Category A except that there is reasonable doubt that they have ever occurred in a natural state. Species placed only in Category D form no part of the British List, and are not included in the species totals.

Some are placed in multiple categories such as, for example, those species occurring in Category A which now also have naturalised populations (e.g. Red Kite) that match Category C criteria.

Other

- I – a Category A species recorded in Ireland but not in Britain.
- X – a globally extinct species.
- † – species for which records are considered by BBRC.
